OPERATING USING A BEOLINK 1000 OR OTHER OLD REMOTE CONTROLLERS.

The button on older Bang & Olufsen remote controls does the exact same operation as the button on newer remote controls.

The older Beolink remote controls do not have direct coloured buttons, and a two button zap sequence must be pressed to get to these. Also programme zap mode must be changed, see the setup manual.

		Green B
		Yellow C
		Blue D
		Red A

Congratulations.

The EXT controller from www.oneremote.dk can fully operate your device using your Bang & Olufsen remote control terminal, via a Bang & Olufsen TV.

Beo4 Beo5 or Beo6 remote controls can be used. Beolink 1000 can be used with reduced functionality. This guide explains how.

This EXT controller is ready for use, plug & play. See the oppositeside regarding daily operation.

Some operations can be altered, to improve interaction with other controllers or to your convenience. Refer to the installation section further on, if changes are needed. Refer to the Setup guide.
