OneRemote RMB4 Converter for Beo4

Type 35104406 controls

AppleTV

With the OneRemote RMB4 converter installed in your Bang & Olufsen Beo4 remote control terminal controlling your non-B&O TV you may also control an AppleTV or a MAC computer. This guide explains how.

When **DTV** or **SAT** is pressed, the TV switches to display its HDMI2 source. Thus the Apple device needs to be connected as this HDMI-source.

When **DTV** or **SAT** is pressed, the OneRemote modified Beo4 shifts to send Apple controls, rather than TV controls. The Apple device may then be controlled in accordance with the *Apple controls* table on the next page.

Control table - AppleTV and MAC computer

Apple Controls	
SAT / DTV	Start Apple control
	Apple power on <i>press shortly.</i>
	Apple power off <i>press 6 seconds</i>
	Enter
	Menu
	Play/ pause
/	<i>Use arrows for screen manoeuvring.</i>
